Ember Storm

Home Hardening, How to protect your property against wildfire:

- Use fire-resistant materials for construction.
- Use Class A or Class B fire resistant roof material. Establish an outdoor source for water.
- These practices will help protect your property and give you better protection if you are trapped in the building.

Homeowner's, What YOU can do

IMPORTANT

Failure to maintain Defensible Space as required by WUI may impact your insurance claim in the event of a fire incident.

As the owner, YOU are responsible for modifying, removing, and disposing of nonfire-resistive vegetation on your property.

If Defensible Space was required for the construction of your building and/or structures on the property it must be maintained for the life of the building.

Wildland Urban Interface Code

- **101.3 Objective.** The objective of this code is to establish minimum regulations consistent with nationally recognized good practice for the safeguarding of life and property. Regulations in this code are intended to mitigate the risk to life and structures
- from intrusion of fire from wildland fire exposures and
- fire exposures from adjacent structures and
- to mitigate structure fires from spreading to wildland fuels. The extent of this regulation is intended to be tiered commensurate with the relative level of hazard present.

Home Fire Hazard Assessment

An ounce of prevention is worth a pound of cure.

Benjamin Franklin

Intellectuals solve problems, geniuses prevent them.

Albert Einstein

True prevention is not waiting for bad things to happen, it's preventing things from happening in the first place.

Don McPherson

Each homeowner that improves their homes defensible space and its ability to withstand embers/flames decreases the chances of ignition of their home, their neighbor's home, their community and neighboring communities
